

CORRIGENDA

Diagnostic testing for SARS-CoV-2: interim guidance, 11 September 2020

(WHO/2019-nCoV-19/laboratory/2020.6)

Page 7, lines 52–53

Delete: Virus neutralization assays are considered to be the gold standard test for detecting the presence of functional antibodies. These tests require highly skilled staff and BSL-3 culture facilities and, therefore, are suitable for use in routine diagnostic testing.

Insert: Virus neutralization assays are considered to be the gold standard test for detecting the presence of functional antibodies. These tests require highly skilled staff and BSL-3 culture facilities and, therefore, are unsuitable for use in routine diagnostic testing.
